

TECHNICAL DATA SHEET FLORPROTEC BREATHERTEC

BASE MATERIALS & FEATURES

Breathertec is an impregnated needlefelt constructed from synthetic fibres.

FLAME RETARDANT DETAILS

Tested to BS4790:1987 Flammability

Low Radius Effect: BS5287: 1988

APPLICATIONS

Temporary protective covering for floors that may release vapours during the protection period. Temporary protection for marble floors, columns and walls.

ADVANTAGES

Exceptionally resistant to tearing and puncturing and its 5mm construction offers cushioning and impact protection.

The impregnation prevents the penetration of site debris and gritty particles. The upper surface is heat treated to create a stiff and abrasive resistant surface, whilst the under surface has a softer fabric finish that grips and protects surfaces. Quick and easy to fit. The 2m width reduces taping and covers large areas fast.
